2695 - Vectors

Description

A Jose really likes math and came up with given their limited knowledge in working with vectors make a program to work with these. As Jose not program very well need you to help make a program that given n vectors, perform the sum of these.

Input specification

The input consists of an integer N (0 <N <= 100), the number of cases following test. For each test case, an integer k (0 <k <20), with the number of vectors to be added. And the following line in the list of vectors separated by a space. A vector will be given by {dato_1, ..., dato_n}. Where n (0 <n <= 10) and the data will not be greater than 1000, integer values ??in its absolute value.

Output specification

For each case must return the result of the operation, if you can not perform this operation show "No solution" without the quotes.

Sample input

```
1
3
{1,2,3} {1,2,3} {1,2,3}
```

Sample output

```
{3,6,9}
```
